CHAPTER 5

MATERIAL RECEIPT

Material receipt is the gaining of possession of an item of Navy property through acceptance of physical custody. There are several transportation sources from which we may receive material. These include the U.S. Postal Service, the United Parcel Service, Government vehicles, and direct pick-up from a vendor. Other transportation sources include commercial or Government air and water freight, commercial trucking firms, and vendor deliveries. This material may be for stock or direct turnover (DTO) to the requisitioner. In some cases, we may keep the material in a holding area for pickup by the customer. Also, we may send the material to a packing unit for preservation or protection. At other times, we may send the material to a shipping unit to be shipped to another activity.

This chapter will help you gain the knowledge needed to do the job in receiving material. You will be able to describe the responsibilities of personnel assigned to process material. Also, you will learn the different methods of processing receipts from various activities—this includes inspecting and verifying material receipts. You also will learn how to distribute copies of receipt documents and maintain files.

RESPONSIBILITIES

The Navy uses different methods to accept and pay for material it buys. We may receive material at the contractor's place or at the Naval activity. The payment for material received at a naval activity can be done before or after the receipt. Regardless of the method used, we must ensure that the material the Navy pays for is actually received and accepted by a Navy representative. You must have proper controls in these areas to ensure material accountability.

SUPPLY OFFICER

The supply officer is responsible for the receipt, identification, inspection, and distribution of all incoming material. Also, the supply officer is responsible for processing receipt papers and associated documents. The supply officer delegates the responsibility for physical receipt of the material to the assistants and division officers.

SPECIAL ASSISTANTS

On ships, the stores/material/cargo officer (when assigned) is responsible for the administration of stores functions. They report to the supply officer on all receiving matters. These functions include material receipt preparation, receipt procedures, material inspection, and receipt processing. On shore stations, the material division officer is responsible for material receipts.

STOCK CONTROL OFFICER

The stock control officer reports to the supply officer or the assistant supply officer on all matters concerning the receiving of material. These include receipt processing, reporting, reversals, and discrepancies. The stock control officer is responsible for the financial report imbalances from receipts.

RECEIVING SUPERVISOR

The receiving supervisor is responsible for the identification and inspection of incoming material. The supervisor is responsible for separating the material for stock and direct turnover to customer. These responsibilities also include distribution of material to storerooms or to customers. Additionally, the supervisor ensures that the material is correctly marked and the paperwork properly distributed.

DUTY AK

The duty AK is responsible for receiving, identifying, inspecting, and distributing material after normal working hours. The duty AK is responsible for ensuring that receipt documents are correct, and that they are given to the supervisor the next day.

TYPES OF RECEIPTS

The method used in buying material, as discussed in chapter 4, determines the method for processing receipts. The following paragraphs explain these different types of receipt.

RECEIPTS FROM THE DEFENSE LOGISTICS AGENCY/GENERAL SERVICES ADMIMSTRATION

Material finished by the Defense Logistics Agency (DLA) or General Services Administration (GSA) will be accompanied by a Department of Defense (DOD) form. This form may be a DOD Single Line Item Release/Receipt Document (DD Form 1348-1) or Issue/Receipt Release Document (DD Form 1348-1A).

RECEIPTS FROM PURCHASE

Receipts from purchase are those materials and services procured by using DD Form 1155, or imprest fund. Usually, a copy of the procurement document also serves as receipt paperwork.

RECEIPTS FROM SHORE AND AFLOAT ACTIVITIES

Three copies of DD Form 1348-1 or DD Form 1348-1A will accompany each item of standard material furnished by a shore supply activity.

Material received from afloat units will have three copies of DD Form 1348-1 with them. Also, material may have a white copy of DD Form 1348 or NAVSUP Form 1250-1 that was submitted as requisition.

RECEIPTS FROM COMBAT LOGISTIC FORCE SHIPS

Material received from Combat Logistic Force (CLF) ships normally will have a computer listing of all the items and DD Form 1348m for each item. The listing includes, as a minimum, the following data elements:

- National stock number
- Unit of issue
- Quantity
- Document number
- Fund code
- Extended money value
- Unit price
- Cognizance symbol

RECEIPTS FROM OTHER GOVERNMENT ACTIVITIES

Material received from other Government activities are classified into two groups. They are receipts with reimbursement and receipts without reimbursement.

Receipts With Reimbursement

These are receipts for which Navy department funds will be used to the credit of the department from which the material was received. All receipts from Government departments, except for certain receipts from the Army and Coast Guard, are subject to reimbursement. The receiving activity will furnish a receipt with the supply officer's signature to the transferring organization. The invoice, or other document confirming the receipt, will be priced, extended, totaled, and will show the authority of the transfer.

Receipts Without Reimbursement

These are receipts for which the receiving activity does not transfer Navy department funds to the department that transferred the material.

MISCELLANEOUS RECEIPTS

The most common types of miscellaneous receipts are push material and turn-in items.

Push Material

Push materials are equipment and repair parts shipped automatically to an activity. These materials are used for the support of configuration and load list changes. Material may be shipped in this method to correct material deficiencies identified by type commander or inventory control points. In this case, the receiving activity will receive advance notification of shipments. The receiving activity is responsible for making outstanding requisition files to record due-in quantities and monitor receipts.

Turn-in Items

This is material turned-in by the activity's departments, supported units, and nonsupported units.

METHODS OF MATERIAL DELIVERY

There are various methods of material delivery. They are direct delivery, freight, or mail. The following texts describe these delivery methods.

DIRECT DELIVERY

Materials or services from a government or commercial source that were received and accepted by a ship, squadron, or group representative at either the delivery point or source of supply is known as direct delivery. After acknowledgement of receipt, the Navy owns the materials and services; they are considered satisfactory unless discrepancies are noted. The supply officer must set up procedures to make certain only authorized personnel pick up, receive, or sign for materials or services.

FREIGHT

The freight method consists of material shipped via the DOD transportation system or commercial freight system. The Government or Commercial Bill of Lading is the document used for material shipped by freight. We can receive freight in the United States, foreign ports, and during UNREP.

MAIL

The United States Postal Service (USPS) delivers small items. These items include letters and packages sent by way of the various postal programs. Both Government and commercial sources often require a receipt signature. Receiving section personnel are normally authorized to pickup and sign for postal deliveries. The supply officer is responsible for setting up and maintaining a list of personnel to receive official mail.

RECEIPT DOCUMENTATION

All material and services received must have receipt documentation. When material received does not have paper work, the receiving section personnel must immediately prepare a dummy receipt for processing. Incoming material should have one or several receipt documents with it. The type of document depends on the method of purchase, supplier, type of delivery, and Government inspection requirements. Any document received with the material or service that contains enough information to process the receipt maybe used as a receipt document. Although you have a variety of receipt forms, the general pattern for processing is the same. These patterns are as follows:

- Determining the type of receipt inspection required
 - Determining if material requires special handling
- Marking the receipt document with date, quantity received, receipt signature, and discrepancies noted during receipt
- Sending the receipt document for further processing

DD FORM 1348

The DD Form 1348 6-part manual receipt is used both as a requisition and receipt document for most materials transferred between nonautomated ships. When required by the issuing ship, the receiving ship acknowledges such transfer on the white copy of the DD Form 1348. Receipt acknowledgement is always required on the requisitioner's hardback copy of the DD Form 1348 before it is filed in the material completed file.

Show receipt on the white or hardback copy of the DD Form 1348 by circling the quantity received and accepted and entering a receipt date and signature in the Remarks field, as shown in figure 5-1.

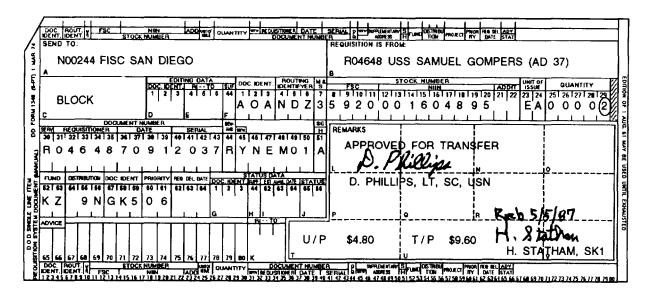

Figure 5-1.-DD Form 1348 (6-part) manual receipt.

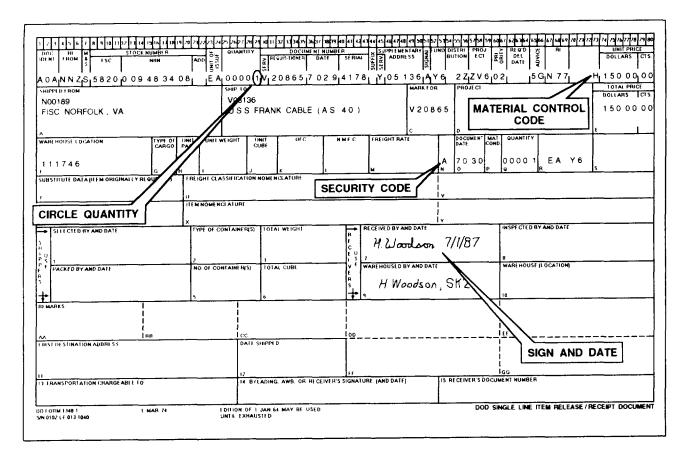

Figure 5-2.-DOD Single Line Item Release/Receipt Document, DD Form 1348-1.

DD FORM 1348-1

Receipts from shore activities and automated afloat units are done either on a DD Form 1348-1 or DD Form 1348-1A. The title of these forms are DOD Single Line Item Release/Receipt Document and Issue/Receipt Release Document (IRRD), respectively. Examples of these receipt documents are shown in figures 5-2 and 5-3.

The following paragraphs describe the receipt procedures for material received on a DD Form 1348-1.

Circle the quantity in record positions 25-29 if correct. That is, the number of item received is the same as the quantity shown on the document. If the quantity is different, line out the original quantity. Then, enter and circle the quantity actually received immediately above the original quantity. Enter the date received and signature in block 7. Block N of the DD Form 1348-1 contains the security code for the item shipped. The record position 73 of the document contains the material control code (MCC).

Receiving personnel should be familiar with both Military Standard Requisitioning and Issue Procedures MILSTRIP and local management coding and command instructions for controlled items.

DD FORM 1348-1A

The DD Form 1348-1A is designed to be used with the activity's Logistics Applications of Automated Marking and Reading Symbols (LOGMARS) processing equipment. The document number (in box 24) and NSN (inbox 25) are bar coded. Box 26 contains the bar coded Routing Identifier code (RIC), unit of issue (UI), quantity (QTY), Condition code (CON CODE), Distribution code (DIST), and unit price (UP). These 20 position characters are continuous with no dashes or spaces. The procedures for processing IRRD are the same as prescribed for DD Form 1348-1. The lower left portion of the IRRD contains the security and MCC information. Use this information to ensure proper receipt processing.

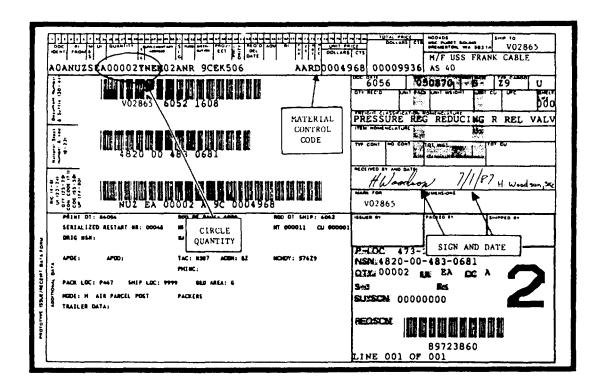

Figure 5-3.-Issue/Receipt Release Document (IRRD), DD Form 1348-1A.

DD FORM 1149

The Requisition and Invoice/Shipping Document, DD Form 1149, is normally used to requisition or receive specific materials or services, such as repairs or rental equipment. When materials or services are received on a DD Form 1149, the ordering department will do the technical inspection, if required. The unique nature of the material received on the DD Form 1149 requires that receiving personnel be extremely careful when processing these receipts. Receiving personnel must secure and properly distribute these materials. Figure 5-4 shows an example of how to till out a DD Form 1149. After technical review and acceptance, receiving personnel will complete the DD Form 1149 receipt document. To complete the DD Form 1149, you must mark and circle the quantity in column D. Also, you must date and sign in the lower right portion of the DD Form 1149, but not over any existing information.

DD FORM 1155

Ashore and afloat activities use DD Form 1155 as an order for supplies and services or as receipts from commercial sources. When used as receipt document, complete DD Form 1155 by circling the quantity in column 20. Also, enter the date and signature in block 26 (fig. 5-5). Proper processing of DD Form 1155 receipts requires familiarity with the terms and concepts discussed in the following paragraphs.

Direct Delivery

When used for direct delivery, blocks 13 and 14 of DD Form 1155 will show that the material and invoice will be sent directly to the ordering activity. In such cases, the ordering activity is responsible for both a quality and quantity certification and acceptance of material.

Normally, there are no qualified receiving personnel to make technical judgments in receiving material. A technical specialist from the ordering department or unit should help confirm acceptance before completing the DD Form 1155. Figure 5-5 shows receipt for direct delivery on a DD Form 1155.

 $Figure \ 5\text{-}6\text{-}Order \ for \ Supplies \ and \ Services \ DD \ Form \ 1155 \ (indirect \ delivery).$

Fast Pay

The fast payment procedure allows payment, under limited conditions, to a contractor before the Government's verification that supplies were received and accepted. Fast payment is for ordering supplies by afloat and overseas activities only.

Fast pay is the payment made to a commercial source based on proof of shipment by the vendor. This means the vendor gets paid by submitting an invoice proving that supplies were delivered to a post office, common carrier, or Government receiving point. The vendor agrees to replace, repair, or correct supplies not received at destination, damaged in transit, or not conforming to purchase agreements.

Use this method for buying material that does not require technical certification at the destination. Prepare DD Form 1155 according to enclosure 2, chapter 5, of NAVSUPINST 4200.85 (series). The DD Form 1155 should include the fast payment procedure clause at FAR 52.213-1 in full. Any BPA that may have fast payment order should also contain the fast payment procedure clause. Mark the original and all copies of the DD Form 1155 with "FAST PAY" in bold letters. The consignee must notify the purchasing office within the following time frames:

- Receipt of conforming material within 10 days from the receipt date
- Within 30 days if materials were not received by the date shown in block 10 of DD Form 1155
- Within 10 days after receiving material that does not conform to the requirements of the order

Indirect Delivery

When used for indirect delivery, blocks 13 and 14 of DD Form 1155 will show that the material and the invoice will be delivered to a transshipper. In this case, the supporting activity performs the technical inspection and confirms acceptance of the material. The receiving personnel need only verify the quantity of material received. See figure 5-6 for a sample DD 1155 processed for indirect delivery.

The procedure for ordering material on a DD Form 1155 often involves a customer picking up the material. This method is also known as "bearer pick-up." We use this method when the ordering department goes directly to the vendor to get material. The supply officer establishes local procedures to ensure proper receipt processing. The procedures include requirements for picking up all material and removing the DD Form 1155

copy from the bearer suspense file. The suspense copy of DD form 1155 goes to the receiving section for processing.

The ordering activity receives advance notice for each DD Form 1155 purchase placed by another activity in response to a requisition. The advance package includes a copy of the DD Form 1155 and a preaddressed card titled "Report of Nonreceipt, Damage, or Nonconformance."

Report of Receipt, Nonreceipt or Nonconformance

The ordering activity completes and returns the Report of Receipt, Nonreceipt, or Nonconformance with an advance DD Form 1155. This form is used when material received under contract on a DD Form 1155 is not acceptable. The reasons for not accepting material includes damaged in shipment or not technically acceptable (direct shipments only). You also use this form to report orders that were not received within 60 days of the specified delivery date. Receiving personnel should then tell the procurement section to begin new procurement action if necessary. When material has been received on DD Form 1155, the Purchase Action file copy will be certified as received. See figure 5-7 for a sample Report of Receipt, Nonreceipt, or Nonconformance.

DD FORM 250

The Material Inspection and Receiving Report, DD Form 250, is used to verify material inspection and acceptance for items received directly from a contractor. The DD Form 250 may be used for shipments of material procured by ashore activities on DD Form 1155. Receiving personnel will review the DD Form 250 to determine the type of certification required. The following paragraphs explain the types of certification.

Acceptance At Destination (Code D)

Block 8 of DD Form 250 will show if acceptance at destination (code D) was requested by the ordering activity. If block 21B indicates procurement quality assurance (PQA) and acceptance, you should contact a qualified technician from the ordering department. The technician will inspect and certify material acceptability in block 21B.

The receiving personnel will certify the quantity received in block 22. For quantity discrepancies, line out the quantity in column 17, enter and circle the quantity received. For material received in damaged condition,

INSTRUCTION FOR USE IMPORTANT: Complete and return this card to: Naval Supply Center Code 200 (1) Within 10 days after receipt of material, or (2) If material not received within 30 days after deliovery date specified in the order, or (3) If nonconforming material was received Purchase Order No. Requisition. No. Activity
(1) Within 10 days after receipt of material, or (2) If material not received within 30 days after deliovery date specified in the order, or (3) If nonconforming material was received Purchase Order No. Requisition. No. Activity
(1) Within 10 days after receipt of material, or (2) If material not received within 30 days after deliovery date specified in the order, or (3) If nonconforming material was received Purchase Order No. Requisition. No. Activity
(2) If material not received within 30 days after deliovery date specified in the order, or (3) If nonconforming material was received Purchase Order No. Requisition. No. Activity

Figure 5-7.-Report of Receipt, Nonreceipt or Nonconformance.

line out quantity and enter and circle quantity received in good condition. Write an explanation of the differences directly below the adjusted quantity, as shown in figure 5-8. After block 21A has been completed for PQA at origin, receiving personnel then certify the quantity received in block 22.

Acceptance At Source

When block 8 shows Acceptance code S or O (source or other) and block 21A was completed for PQA and acceptance, receiving personnel need only to certify the quantity received in block 22. Figure 5-9 is a sample DD Form 250 accepted at source.

Process receipts for material received on a DD Form 250 as soon as possible to fulfill the discount terms shown in block 5. This type of material is normally expensive. Quick processing of receipt can result in a reduced cost to the Government (fig. 5-9).

STANDARD FORM 1103

You may use U.S. Government Bill of Lading (GBL) (Standard Form 1103) to give delivery instructions to a commercial carrier. To provide receipt documentation to the ordering activity, use Standard Form 1103B. Shore activities often divert commercial deliveries directly to ships in the area to cut the need for double handling of material. In such cases, it is the ship's responsibility to tell the ashore support activity of any material received short or damaged. Commercial carriers do not always make scheduled deliveries. Receiving personnel must be able to react quickly to unexpected deliveries. Quick response to deliveries will avoid additional charges against the Government by commercial carrier. See figure 5-10 for sample GBL.

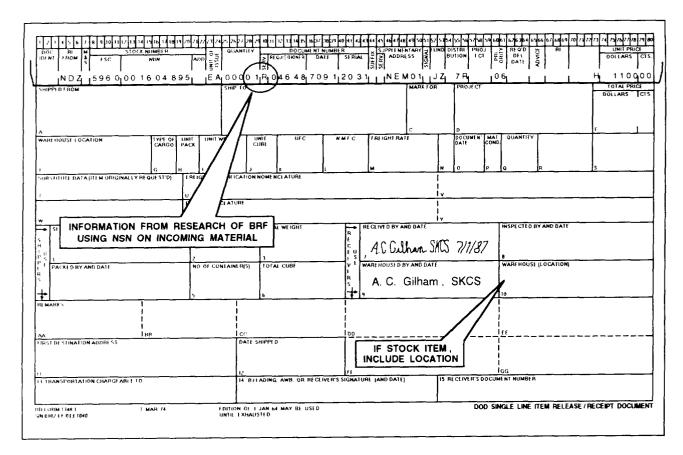

Figure 5-11.-DD Form 1348-1 (Dummy Receipt).

MATERIAL RECEIVED WITHOUT PAPERWORK

The following texts describes the action needed for processing material received without paperwork.

Dummy Invoice

Material received without paperwork needs research. Use the information gathered from research to prepare a dummy document and process the receipt. Personnel in the receiving area perform the research and prepare a dummy receipt on a DD Form 1348-1 (fig. 5-11) or DD Form 1149. The research includes checking the requisition outstanding file by using available information from the material. The information needed are source of supply, stock or part number, i tern description, document number, fund code, and location (if for stock). When this information is known, enter the quantity, date, and receipt signature on the dummy receipt. You can then process the dummy paperwork as a receipt. Keep dummy receipts in a separate stock control history file.

Receipt Of Original Documentation

There will be occasions when you will receive the original shipment paperwork after the material and dummy invoice are processed. In these case, compare the original paperwork and dummy invoice information. If differences exists, corrector adjust posted records as appropriate. Attach the original shipment paperwork with the dummy invoice in the material completed file.

MATERIAL SAFETY DATA SHEET

The DOD Hazardous Material Information System (HMIS) requires that a material safety data sheet (MSDS) be completed for all hazardous material purchased from commercial vendors. Hazardous materials are those materials that, by virtue of their potential y dangerous nature, require controls to assure adequate safety to life and property. The manufacturer or vendor must identify hazardous material at the time of procurement. They must also package, pack, and mark the material to provide the proper degree of

Figure 5-13.-Material Safety Data Sheet (Back).

PROCESSING RECEIPTS

Material receipt is a continuous process with day-to-day work depending on location of the activity and the type and amount of material received. Some procedures may vary in other activities, but the goal is the same. That is, to provide fast and accurate distribution of material and posting of receipt transactions. The procedures for processing receipts include identification and inspection of material and determining the disposition of the item. The procedures also include separating stock items fom DTO and recording and reporting receipt discrepancies.

When considered necessary, a transit shed or butler hut is constructed to support shipboard supply operations. This provides additional space and allows some receiving functions. The ship's supply officer determines the receiving functions, personnel, and equipment when receiving is to be performed ashore.

FILES USED IN RECEIPT PROCESSING

Files are used to keep records of outstanding requisitions applicable to prospective material receipts. Upon receipt of material, these records are used to ease the receipt process, Also, files are used for holding records as proof of receipt or disposition of material.

Material Outstanding File

The material outstanding file (MOF) contains a copy of procurement documents for materials or services not yet received. This file contains various documents as attachment to the procurement request. The file may contain follow-up, supply status, shipping status, as well as shipping documents that are specifically applicable to a single item.

Material Completed File

The material completed tile contains a copy of procurement documents removed from MOF. This tile contains received, canceled, or rejected records of procurement.

Multiple Item Shipping File

This file contains outstanding shipping documents that cover multiple item shipments. It consists of memoranda, transportation control and movement document (TCMD), and other types of shipping papers. This file is kept in the supply office or main receiving area. The outstanding documents are tiled according to shipment destinations and should be reviewed prior to entering port. When a multiple item shipment is receives the outstanding document will be marked with date of receipt. Any discrepancies noted will also be written on the document. The receipts will then be filed in a separate folder marked "Completed Shipping Documents."

Miscellaneous Receipt File

This file contains shipping papers and invoices of material received but not ordered by the activity. For example, an item shipped by a shore activity to an aircraft squadron aboard ship. In this case, the receiving personnel will transfer the item to the squadron, get signatures, mark the receipt date, and file the document. You should prepare a consumption document for material received and issued as DTO.

MATERIAL INSPECTION AND VERIFICATION

Material must be inspected and verified upon receipt. Receipt inspection requires a quantity and quality certification, depending upon the source of supply. The following paragraphs describes the requirements for inspection and verification of material receipts.

Receipts From Naval Activities

Materials received from naval activities require a quantity inspection only. The shore supply activity has conducted the quality inspection upon acceptance of material from the original supplier. There is no need to duplicate the quality inspection aboard ship or station. The receiving personnel need only verify the quantity and inspect for obvious damage or tampering of material. Opening material received in bales, packages, or cases to ascertain their contents is not necessary. Receiving personnel can receive them according to their external markings and package count. Show acceptance of the entire quantity shipped by circling the quantity on the shipping document. If damage is obvious, technical personnel from the user department will need to perform an inspection to ensure the material is acceptable. If only the packaging is damaged, repack and remark the material for further processing. If the material is damaged, mark the paperwork as described in previous paragraphs. Then, put the material in a holding area for discrepancy reporting.

Receipts From Marine Corps and Other Government Activities

Receipts from government activities other than Navy will be inspected for quality and quantity. Receipts from Marine activities by Marine aviation logistics squadrons (MALS) will inspect for quantity only. Receiving personnel will perform the quality inspection. If receiving personnel are not qualified to do the quality inspection, the user department should provide a technician to do the inspection. After completion of the inspection, show acceptance by circling the quantity on the document.

Receipts From Commercial Sources

Material received from a commercial source is a result of a purchase request submitted to a civilian vendor. In this section, we will discuss the requirements before accepting material from commercial vendors.

Material received from commercial vendors may require quality and quantity inspections. When inspected and accepted by the ashore activity, the quality inspection need not be performed afloat; however, the receiving activity must perform the quantity inspection before accepting the material. Upon receipt of material not inspected and accepted ashore, receiving personnel will perform the inspection. If needed, you may request assistance of technical personnel from the user department to do the quality inspection. A full and thorough quality inspection should be conducted. All packages must be opened and the contents verified by count. All DTO material will be inspected and accepted by the cognizant department head or representative, when possible. Itemized copies of invoices or delivery papers should accompany material deliveries from commercial vendors. Receiving personnel should not sign for material unless the shipper can provide a copy of the receipt document. Receiving personnel should not accept material until fully satisfied that the material conforms to the specifications in the purchase document or contract.

BPA receipts will be inspected for quality and quantity. Personnel who pick up material from supply will certify these inspections at time of pickup. This procedure also applies for material purchased through imprest fund.

DETERMINING MATERIAL DISPOSITION

Material received by an activity will be either for stock or DTO. You can determine where to send the material by the serial on the document number or by the supplementary address on shipping document. The supplementary address field of the DD Form 1348-1 normally contains the storeroom location for stock items. It also may have the work center or phone extension number for DTO items.

Document Information

The following texts describe the information on receipt documents that will help you in determining material distribution.

The ship to/mark for block contains the requisition number of purchase documents.

The <u>document number</u> block contains the UIC and document serial number that identifies stock and DTO requisitions.

The special material identification code SMIC indicates if material is in support of a special program.

The <u>security code</u> indicates special handling based on security classification or hazardous nature of material. The codes used for classified material are A, B, C, D, E, F, G, H, K, L, O, S, T, U, and 7. Codes used for pilferable material are I, J, M, N, P, Q, R, V, W, X, Y, and Z. Codes used for ammunition and explosives are numbers 1 through 8. Refer to chapter 17 of NAVSUP P-437 for the meaning of these codes.

The <u>Material Control Code (MCC)</u> block indicates special handling based on specific control or accounting requirements.

The <u>substitute data</u> block advises that the item is an acceptable <u>substitute</u> for the item ordered.

The required delivery date block, when used, indicates expeditious handling required.

The <u>priority</u> block indicate the requisitioner's priority and therefore the speed of handling required.

The <u>supplementary address</u> block may have storeroom location for stock items or local coding of division for DTO items.

The <u>project code</u> block identifies shipments of material for specific projects or programs. The last digit of the project code contains the last digit of storeroom location for stock items (See Appendix 11 of NAVSUP P-567).

Shipment Labels And Markings

The Military Standard Marking For Shipment And Storage, MIL-STD-129M, provides information on shipment labels and markings. Figure 5-14 shows the placement of markings on unit packs, intermediate containers, and exterior containers. The following texts describe the identification information on shipping containers.

IDENTIFICATION MARKINGS.— The first line of information is the NSN/NATO stock number. This includes the prefix or suffix. If there is no NSN assigned, this line may be blank.

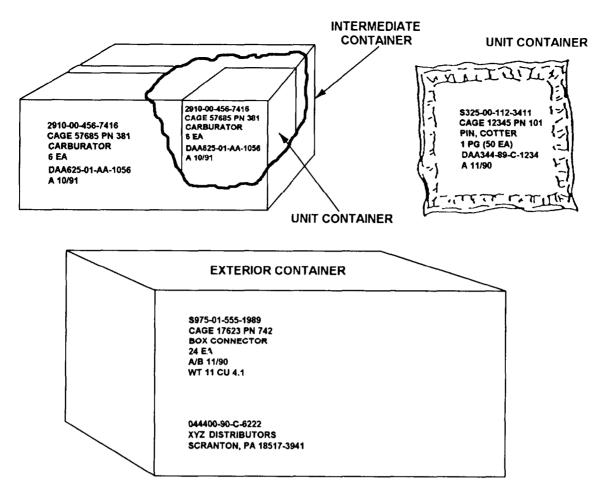

Figure 5-14.-Shipment markings.

The second line is the CAGE code and part number. The CAGE code identifies the company that has the contract for the item. The part number identifies the item.

The third line contains the item description or nomenclature of the item.

The fourth line is the quantity and unit of issue. A nondefinitive unit of issue will have a quantitative expression such as 1 RO (100 FT). This means one roll contains 100 feet of material.

The fifth line contains the contract number/purchase order number. This line includes the four-digit delivery order or call number, when used.

The sixth line contains the level of protection and date. For example, the A 10/92 means level A protection (preservation) was provided in October 1992.

Unrelated items, such as mixed stock numbers or items combined into a shipping container, will have MULTIPACK markings. These markings include the word MULTIPACK on the first line. The second line contains the level of protection and the date of the

multipack. The third line contains the gross weight and cube.

Example: MULTIPACK

A 10/92

WT 100 CU 6

ADDRESS MARKINGS.— The domestic shipment address label contains the following minimum information.

The first line contains the control number or reference number. As a minimum, it contains the transportation control number (TCN) as the single shipment identification number. The first line may also contain the contract number, purchase order number, or GBL number.

The TCN contains 17 characters. The purpose of assigning a TCN is to control and manage every shipment unit throughout the transportation pipeline. The first three parts of the TCN for MILSTRIP shipments are normally the requisition number. The following paragraphs explain the breakdown of TCN.

Record positions 1-14 normally contains the document number assigned in record positions 30-43 of the requisition. Shipments in MULTIPACK will contain the document number of the requisition with the earliest RDD.

<u>Record position 15</u> contains the suffix code from record position 44 of DD 1348-1. An X in this position means there is no suffix code assigned.

<u>Record position 16</u> contains the partial shipment code.

Record position 17 contains the split shipment code.

The partial and split shipment codes indicate whether or not a shipment unit is separated into increments. These codes also identify the specific increments of shipments up to the 23rd increment. The 24th and each later increment will use another TCN. Refer to DOD 4500.32-R, *MILSTAMP*, for additional information on these codes. The following codes are those commonly seen by the AK.

Code Shipment Increment

X Complete shipment

A 1st increment of a partial or split shipment

B 2d increment or piece

C 3d increment or piece

The following are examples of partial and split shipment codes assigned for surface movement.

DESCRIPTION	TCN POSITION 16/17
A shipment moving as a complete unit from the origin shipper	XX
A shipment unit partialed into three increments for movement from the shipper:	
1st partial	AX
2d partial	BX
3d partial	CX
A complete shipment unit (XX) split into three increments by the transhipper:	
1st partial	XA
2d partial	ХВ
3d partial	XC
A partial shipment unit (AX) from the shipper split into three increments by the transhipper:	
1st split of partial A	AA
2d split of partial A	AB
3d split of partial A	AC

The <u>From</u> line contains the name and address of the transferring activity, This will have the DOD activity address code (DODAAC) of the activity.

The <u>To</u> line contains the name and address of the consignee using the DODAAC assigned.

The fourth line will contain the project code and required delivery date, when required.

The fifth line contains the weight and cube of the material.

The sixth line contains the piece number and the total pieces.

Example address markings:

V9999900001111XXX **TCN** #C1234567 B/L **FM NSC SUPPLY** NOWHERE, FL 12345-0009 SUPPLY OFFICER TO V99999 USS INPORT CV-00 FPO AE 99999-0009 PROJECT CODE: ABC RDD: 123 WT 25 CU 2 BOX 1 OF 2

Material shipments that originated from DOD activity uses the DD Form 1387, Military Shipment Label. The information on this label may be typed, printed, or bar coded. The DD Form 1387 maybe pasted on the material or attached to a shipping tag. The *MILSTAMP*, DOD 4500.32-R, volume 1, specifies the instructions for and format of the DD Form 1387. See figure 5-15 for a sample bar-coded DD Form 1387. The following paragraphs describe the information on each block of the form.

<u>Data block 1</u> contains the 17-character TCN, either bar coded or printed in clear text. For MULTIPACK shipment, the lead TCN will be in this block.

<u>Data block 2</u> contains the postage data. This field is used for mail shipments only. All others will be blank.

<u>Data block 3</u> contains the DODAAC address of the shipping activity.

<u>Data block 4</u> contains type of shipment service. This field may have Air Express, Blue Label, Overnight

MILITARY SHIPMENT LABEL	DD FORM 1	387	
1. TRANSPORTATION CONTROL NUMBER W6262Q5Ø98Ø2Ø9XXX		2.	POSTAGE DATA

Figure 5-15.-Sample bar-coded DD Form 1387.

Delivery, or other types of services. A blank in this field means there is no service used.

Data <u>block 5</u> contains the ship to and port of embarkation information. The three-digit, air/water port code, and the address will be in this block. For mail inside U. S., this field will have the complete address of the consignee (including zip code).,

Data <u>block 6</u> contains the transportation priority of the shipment.

Data <u>block 7</u> may contain the three-digit port of debarkation designator, when used.

Data block 8 contains the project code, if applicable.

Data <u>block 9</u> contains the consignee's DODAAC and complete address. It will be bar coded or printed in clear text.

Data <u>block 10</u> contains the actual gross weight of the material.

Data <u>block 11</u> contains the required delivery date.

Data $\underline{block\ 12}$ contains the cube (in feet) of the material.

Data <u>block 13</u> contains the freight charge. his information will be on the number one piece of the multiple shipment unit. This field is blank for mail shipments.

Data <u>block 14</u> contains the date of shipment of the material.

Data <u>block 15</u> contains the foreign military sales (FMS), when appropriate.

Data $\underline{block\ 16}$ contains the piece number in bar code or clear text.

Data <u>block 17</u> contains the total pieces of the shipment unit.

SHELF-LIFE MARKINGS.—Material shipment containers with shelf-life items are marked with the word SHELF-LIFE in bold letters. The DOD 4140.27-M contains the instructions for managing shelf-life items. There are two types of shelf-life items. Type shelf-life items have a definitive nonexpendable period of shelf life. They are assigned alpha shelf-life codes (including X). Type II shelf-life items have an assigned shelf life. This shelf life may be extended after completion of inspection, test, or restorative action. Type II items have assigned numeric shelf-life codes (including X). Refer to Appendix 17 of NAVSUP P437 for a list of shelf-life codes.

SPECIAL HANDLING DATA/CERTIFICATION.—

The DD Form 1387-2, Special Handling Data/ Certification, is used for shipping hazardous materials. It is also used for nonhazardous shipments (by military aircraft) that require special handling or protective

services. Some of the items that require special handling are subject to damage by heat or freezing or life or death shipments. The shipper is responsible for completing and certifying the DD Form 1387-2. See figure 5-16 for a sample DD Form 1387-2.

HAZARDOUS CHEMICAL WARNING LABEL.— DOD activities are not required to relabel hazardous chemicals already labeled by the supplier according to the Hazard Communications Standards. Hazardous material received from the supplier without the applicable warning label will have a completed DD

Form 2521 with it. See figure 5-17 for sample DD Form 2521.

Material for Stock

Materials ordered for stock have a specific document serial number assigned. The UIC is the activity's own number, and serial numbers will usually be 0001 through 1900. Aircraft carriers uses the 18 and 19 series document numbers for ordering repairable stock. The first five positions of the storeroom location will be in the supplementary address field. The sixth

Figure 5-17.-Sample DD Form 2521.

position of location occupies the last digit of the project code.

If block N of the receipt document contains a security code, place material under lock and key until you can make delivery to the storage area. If record position 73 contains material control codes D, E, G, H, Q, or X, use the procedure for processing repairable items.

Deliver material with hazardous material markings directly to the storeroom location or to the department that ordered them. The markings used for shipping hazardous material identify the type of hazard (i.e., flammable, toxic, corrosive, etc.). Hazardous items transported via military air will have a DD Form 1387, Military Shipping Label. The item will also have a DD Form 1387-2, Special Handling Data/Certification

Label, attached. The DD Form 1387-2 label contains abbreviated shipping data, a description of the hazardous item, and special handling instructions.

The receiving and transhipping activities will be notified in advance about shipments of classified material moving other than by postal service. The assigned classification codes will be given on advance shipping notice and movement documents. In DD Form 1348-1, the classification code is in block N. Only designated personnel will handle classified material. All classified material will be located in a designated security storage area until receipt of disposition instruction. Personnel handling classified material must have the required degree of security clearance.

Material for Direct Turnover

The document serial number other than 0000 through 1999 identifies material for direct turnover (DTO) to customer. Serial numbers beginning with G or W indicate NMCS/PMCS/CASREP and require immediate action. The UIC on the document is the activity's own. The UIC of embarked squadrons and units should also be considered for DTO processing.

When materials received have G series documents, contact aviation stores (S-6) division for pickup. Contact stock control (S-1) division for W series documents.

If the shipping document contains a security code, place the material under lock and key until the ordering department picks up the material. The security code occupies block N of DD Form 1348-1 and the lower left corner of IRRD. Use the procedures for processing repairable for items identified with material control codes (MCC) D, E, G, H, Q, or X in record position 73. Hazardous material should be turned over to personnel appointed by the ordering department.

Material Without Identification Labels

In some cases, you may receive material that does not have labels or paperwork. You should try to identify it by CAGE and part number, description, and other identifying marks or qualities. Use a dummy receipt to process identified material. When all research methods fail to identify the material, follow the procedures in the following paragraphs.

If material is a consumable, stage the item for turn-in ashore. Seek technical assistance from probable users if material is a repair part. Contact the aviation stores division if material is aviation repairable. Stage unidentified material for turn-in to the nearest naval activity ashore.

Material Returned to Supply

A document must accompany each turn-in transaction. The receiving personnel will inspect it for quantity. Material turned into supply by nonsupported units must be taken up in stock. If the material is excess to stock requirements, offload material to an activity ashore at the earliest opportunity.

Material that cannot be identified by the end-user requires additional technical research. Process material into stock when it is properly identified. Process material for turn-in ashore if research methods failed to identify the item.

Processing of repairable items depends on the condition of the material. Repairable items may be in a ready-for-issue (RFI) or not-ready-for-issue (NRFI) condition. RFI material turned in by a nonsupported unit may be shipped to the nearest supply activity, or it may be placed in stock to fill an allowance deficiency. RFI material turned in by the supported unit will be delivered to the storeroom for further processing. Process NRFI repairable through AIMD for repair. If the item is beyond the repair capability of AIMD, stage the NRFI repairable for shipment to the transshipping activity.

Materials returned to supply that were previously reported as missing or stolen, on DD Form 200, will have the transaction reversed.

SEPARATING MATERIAL RECEIPTS

After learning the disposition of material, forward it to either a storage location or to the customer. The method used to stage and distribute material depends upon several factors. These factors include the space available, location of storeroom, amount of material, and type of material. Aboard ship, additional factors include availability of customer's representatives and ship's operations.

Receipts for Direct Turnover

Mark DTO material receipts with the end user's name or work center code. Place the material in the temporary holding area reserved for the end user. Attach a copy of the receipt document for customer signature. Notify the ordering department immediately if material received has high priority. Notify the ordering department at least daily for material receipts with lower priority. Notify stock control (S-1) or the depot-level

repairable (DLR) manager for receipts of DLR items. Notify aviation stores (S-6) division for receipts of AVDLR items.

After turnover of material, submit the signed copy of the receipt document to stock control for further processing.

Receipts for Stock

Material received for stock should be clearly marked for the storeroom shown on the document and on the material. Attach the stow copy of each document to the material. If feasible, combine small items going to the same storeroom in a box. Seal and clear] y mark the box for the designated storeroom. Aboard ship, use boxes that are small enough to fit on conveyors and hatches and that weigh no more than 60 pounds.

For multiple receipts, mark each piece with the document number. Also, mark each piece with the piece number, such as 1 of 3, 2 of 3, and 3 of 3. Attach the stow document on the No. 1 piece. Deliver stock items to each storeroom daily or more frequently, if possible.

Process receipts of aviation depot-level repairable (AVDLRS) according to the type commander's instructions.

The storeroom supervisor is responsible for ensuring that stock control gets the completed stow copy for further processing.

RECEIPT DISCREPANCIES

There are two categories of material discrepancies. The first category includes discrepancies such as overages, shortages, damages, incorrect, or not received material. These discrepancies are normally caused by the shipper or the transportation system. The second category includes material quality discrepancies. In this category, material cannot be used for its intended purpose because it does not meet the form, fit, or function requirements. These discrepancies are caused by the manufacturer or repair activity. The following paragraphs explain the reporting requirements for both types of discrepancies.

Reporting Discrepancies

The receiving activity uses Standard Form 364, Report of Discrepancy (ROD), for reporting discrepancies caused by the shipper. You may use this form for reporting shipping discrepancies caused by the activity that shipped the material. These shipping activities include contractors, manufacturers, or vendors. SECNAVINST 4355.18 (series) provides detailed instructions for preparing the ROD. NAVSUPINST 4440.179 contains policies, responsibilities, and procedures for reporting and resolving these discrepancies.

The shipping-type discrepancies are material shipments from DOD activities, GSA distribution facilities, contractors, manufacturers, or vendors. Prepare a ROD to report any material with one or more of the discrepancies listed below.

- Shortages or overages valued at more than \$100 per line item. Reported classified or protected items regardless of dollar value. Refer to paragraph 6250.4f(4) of NAVSUP P-485 for processing shortages or overages valued at \$100 or less.
- Receipt of erroneous material, unacceptable substitutes, or duplicate shipments regardless of dollar value. This does not include erroneous y issued material that can be settled with local supply activity.
- Receipt of material valued at more than \$100 per line item for canceled (confirmed) requisitions. This requires a copy of cancellation confirmation.
- The condition of the item, valued at more than \$100 per line item, is other than that shown on the shipping document.
- Receipt of material, valued at more than \$100 per line item, with an expired shelf life.
- Material shipped to the wrong activity, regardless of value.
- Material, regardless of dollar value, received with missing or incomplete technical data markings.
- Material, regardless of dollar value, with missing or improperly prepared supply documentation.
- Material, valued at more than \$100 per line item, reported as shipped via parcel post but not received or received in damaged condition.
- Material received for repair was stripped of parts or components without inventory manager authorization. The total value of the material is more than \$100.
- Repetitive discrepancies from the same activity, regardless of dollar value.

The <u>packaging discrepancies</u> include those described in the following paragraphs. Refer to chapter

Figure 5-18.-Report of Discrepancy (ROD), Standard Form 364.

4 of NAVSUP P-485 and chapter 3 of NAVSUP Publication 1, Volume 2, for additional information.

Submit the report for any unsatisfactory condition resulting from improper packaging. Improper packaging can cause the item or shipment to be lost, delayed, or damaged. The cost for correction is over \$50.

Submit the report for discrepancies resulting in damaged material that may endanger life, impair combat or deployment operations, or affect other material. Report this immediately to the shipping activity, contracting office, and control point by the quickest means. Mail the formalized SF 364 within 24 hours of the initial report.

Submit the report for improper identification of containers or items that require opening the container. Improper identification results in improper storage of material, regardless of cost.

Submit the report for any packaging discrepancy, regardless of cost, involving hazardous material. This includes improper identification marking of items, regardless of whether damage or other unsatisfactory conditions exist.

Submit the report for excessive packaging by contractors that results in additional rests to the Government.

Forms Used for Reporting Discrepancies

Report Item and packaging discrepancies on a Standard Form 364, Report Of Discrepancy (ROD). Prepare the form in original and as many copies as required by NAVSUPINST 4440.179 (series) for distribution. See figure 5-18 for a sample Standard Form 364.

Receiving or transshipping activities must submit the Standard Form 364 (ROD) within the time standards. When extenuating circumstances prevent submission of the ROD within the time frame, enter the reason for delay in block 12 of the ROD. The time frame for submitting the ROD is 150 days for Navy shipments (issues). The time frame for non-Navy shipments are 75 calendar days from shipment date for CONUS and 150 calendar days from shipment date for overseas. The time frame for lost parcel post shipments from Government activities is 45 calendar days from shipment date. The time frame for lost parcel post shipments from commercial sources is 90 calendar days from date of shipment.

Action activities must reply to customers within 45 days after receipt of the ROD. They should provide resolution of the discrepancy or interim status. They also need to inform the customer when they pass the ROD to another activity for further action. To allow for mailing each way, send the first follow-up to a ROD to the action activity 60 days after the submission of the original ROD. Send later follow-ups at 30-day intervals. Follow-up action is the responsibility of the activity that submitted the ROD.

The following text provides information on how to fill out and prepare the ROD. Show shipping or packaging discrepancy, or both, by placing an X in the proper box at the top of the form. Mark mailing envelopes with "Standard Form 364."

Block Explanation

- Date of Preparation. The report is prepared in sequence of year, month, and day; for example, September 22, 1993 is written 93 SEP 22.
- 2 Report Number. Enter the serial number of the report in this block. For example, for the fifth report of the calendar year, enter 005/93.
- To. Enter name, address, ZIP Code, activity address code or routing identifier code, and attention symbol or code of action activity. Enter "See item 15" when reporting both shipping and packaging discrepancies for the same item.
- 4 From. Name, address, and ZIP Code of the reporting activity (consignee).
- 5a Shipper's Name. Enter the name and address of the shipper (consignor) when it is different from item 3.
- 5b Number and Date of Invoice. Enter number and date of vendor's invoice or shipper's bill number. Attach a copy of invoice to the Standard Form 364 (not applicable to packaging discrepancies).
- 6 Transportation Document. Enter the type of transportation document and the identifying number assigned to such document in this block. The document may be a GBL, commercial bill of lading (CBL), manifest, or waybill. The document may also be an ensured or certified parcel post number, or Transportation Control and Movement Document (TCMD). This is a mandatory entry when the shipment received was made via a traceable means. In addition, for shipment-type discrepancies, the following statement should be included in block 12: "Shortage has been verified as not being transportation related."
- 7a Shipper's Number. Enter shipment number (when more than one shipment is under a contract or requisition) and contract or document number.
- 7b Office Administering Contract. Enter name, address, and ZIP Code of the contract administration office (CAO) activity that directed or arranged the shipment.

Block	Explanation	Block	Explanation
8	Requisitioner's Number. Enter the requisitioning activity's number (requisition or purchase order number). Entry of the applicable requisition document number is mandatory in all cases.	10b	Discrepancy Unit Price. Enter the unit price as billed or shown on shipping document. This entry is not applicable to packaging discrepancies.
9a	NSN/Part Number and Nomenclature. When the item received is different from the item shown on shipping documents or different from the item requisitioned, enter	10c 10d	Discrepancy Total Cost. For shipping discrepancies, enter the total money value of material. For packaging deficiencies, enter cost of corrective action. Discrepancy Code. Select the proper
9b	Unit of Issue. Enter the unit of issue as billed or indicated on the shipping document for each item listed in item 9a. This entry is not		Discrepancy code listed on the face of the Standard Form 364 and enter in this block. When proper code is not listed, use code Z1 and describe the discrepancy in block 12.
9C	applicable to packaging discrepancies. Quantity Shipped/Billed. Enter the quantity of items shipped or billed. When Discrepancy code C1 applies, enter the quantity and the Supply Condition code of the item when shipped. This entry is not applicable to packaging discrepancies.	11	Action Code. Enter requested action to be taken from codes listed on the face of the form. When action is other than that covered by the listed action codes, use code 1Z and explain action requested in block 12. Action code 1D or 1F is not used on reports prepared to cover shipments of DOD stock-
9d	Quantity Received. Enter the quantity of item received.		funded items or GSA material. Material still required must be reordered. Action code 1E applies only to local purchase items.
l0a	Discrepancy Quantity. Enter the discrepant quantity. When Discrepancy code C 1 applies, enter the quantity and the Supply Condition cede of the item received. If total quantity received is classified under more than one condition code, enter each separately with the applicable condition code.	12	Remarks. Use this block for supplemental information where the combination of discrepancy codes and action codes needs clarification. Use this block when shipping and packaging discrepancies need explanation. Also, use this block when a breakout of cost to reports for time and materials is required. Include specific data such as appearance, lot or batch number,
is receive	E: When overage material (expired shelf life) ed and discrepancy code Q1 or C2 applies, e following information under item 12		manufacturer or packaging data, inspector number and inspection date, probable cause of improper packaging, and suggested corrective action. 	aging discrepancies, enter the accounting or
	appropriation data required by the action
	activity to credit the account of the reporting
	activity for costs involved in correcting the
	reported discrepancies. This item does not

14a Typed or Printed Name, 'Title, and Phone Number of Preparing Official. Selfexplanatory.

apply to shipping discrepancies.

- 14b Signature. Self-explanatory.
- Distribution Addressees for Copies. Enter all other addressees that are to receive copies of the report.

Use the Discrepancy in Shipment Report (DISREP) for reporting transportation discrepancies in shipments. These are shipments sent through the Defense Transportation System (DTS) and shipments within CONUS by commercial earner. Use the Standard Form 361 for submitting DISREP. NAVSUPINST 4610.33 (series) describes the types of discrepancies that need to be reported on this form. Appendixes E and G of NAVSUPINST 4610.33 provide detailed instructions for preparing and distributing DISREP.

The primary purpose of reporting quality deficient material is to provide feedback to responsible activities. These are activities responsible for design, development, purchasing, maintenance, and contract administration. These activities use the report to determine the cause of the deficiency, to correct them, and to prevent recurrence.

The Ships Parts Control Center (SPCC) monitors action started in response to quality deficient reports (QDR). Also, the SPCC provides disposition instructions to all activities concerned. Submit reports for items with national stock numbers (NSN) to the screening points, as specified in SECNAVINST 4855.6. Send the original report for items with cognizance symbols 1R, 4R, 4V, 4Z, 6R, W, and 7R to the cognizant field activity (CFA). Send a copy of the report or the is if **CFA** not known, to COMNAVAIRSYSCOM (AIR-51624). Send the report to SPCC for material with a 9 in the first position of the cognizance symbol.

You must identify and categorize quality deficient material upon receipt or discovery. The originator decides what product quality deficiency category to assign. The following information is used for assigning the category:

Category Definition

- I A product quality deficiency that may cause death, injury, or severe occupational illness. A deficiency that would cause loss or major damage to a weapons system. A deficiency that directly restricts the combat readiness capabilities of the using organization. A deficiency that results in a production line stoppage.
- II A product quality deficiency that does not meet criteria stated in category I.

You should isolate defective material identified by a QDR. Unless otherwise directed, hold the material as an exhibit for a minimum of 90 days after submitting the report to the screening point. Forward Category I QDR within 1 day after receipt of the report. Forward Category II QDR within 5 working days after receipt of the report. The originating activity is responsible for maintaining a log for assigning the control number and to track replies to each QDR. The originator also maintains copies of all QDR submitted for at least 2 years from the submission date of the QDR. The originator is also responsible for responding to all requests from screening action or support points investigating the QDR. Refer to chapter 4 of NAVSUP P-485 for sample copy of Standard Form 368.

DETERMINING WHEN A SHIPMENT IS CONSIDERED COMPLETE

There are several factors that determine when shipment is considered complete. The following texts describe these factors.

Deliveries by Supply Officers Ashore

Deliveries by supply officers ashore to afloat activities will be considered complete when stores are turned over to the representative of the afloat activity.

Deliveries by Contractors

Deliveries by contractors to afloat activities will be considered complete when stores were delivered to the point specified in the purchase document and a receipt signature has been obtained.

Deliveries Free Alongside

Some purchase documents call for delivery free alongside (FAS) barge or ship. Delivery is considered complete when stores have been inspected, accepted, and delivered alongside or within convenient reach of the ship's tackle or other loading equipment.

Deliveries by Combat Logistics Force Ships

Normally, deliveries by combat logistics force (CLF) ships will be considered complete when stores have been placed in the conveyance along the CLF ship and signatures have been obtained. The conveyances are normally boats or barges. However, during underway replenishment (UNREP), deliveries will be considered complete when the stores have cleared the side of the issuing ship.
